Comparable EBIT by pool

EUR millions, latest reported

INTERPRETATION

Enterprise value discounts the core, stable pharmaceutical distribution and wholesale businesses heavily, because of the distressed valuation of the Kronans Apotek joint venture. The market implies an undemanding 4.7x EV/EBITDA multiple for the core and a severe 60% discount on the JV's book value, pointing to significant hidden upside if the JV turnaround succeeds.

RECOMMENDATION

06

Why we land on the call we do

The supporting prose, the rating decision, and the three load-bearing reasons.

At 0.93 euros, the stock is depressed by joint-venture distress, which underpins a BUY rating with a 1.15-euro target price, implying about 24 percent upside over the next 12 months.

Oriola Oyj's €172 million equity capitalization is depressed by the distressed Swedish retail pharmacy joint venture Kronans Apotek, which obscures a highly stable, cash-generative distribution duopoly. The core Services and Products operations produce €44 million in recurring forward EBITDA, de-risking the group's €109 million forward net debt at an undemanding 4.7x EV/EBITDA multiple (€206 million allocated EV).

Conversely, the 50% JV has recorded two consecutive €16 million goodwill impairments and drags the bottom line by €18 million to €22 million, causing the market to assign a severe 60% discount (0.4x) to its €187 million carrying book value. Re-rating the stock to the upside scenario of €284 million (€1.54 per share) requires sequential JV EBITA recovery to 2.0% in H2 2026, erasing the distress discount and fully realising book value.

CORE ANALYSIS · EXECUTIVE MAP

07

How the company creates economic value

The mental model behind every pool deep-dive that follows.

Valuing Oriola Oyj's enterprise value means adjusting for two distortions that obscure the group's underlying economics: a change in revenue recognition in 2026 and equity accounting of a deeply distressed joint venture. In 2026, Oriola restated its pharmaceutical distribution revenue from a principal to an agent model (IFRS 15), collapsing reported net sales from €1.9 billion to €210 million. This change recasts the core business as a capital-light logistics and service fee platform rather than an inventory-heavy trading operation, leaving absolute earnings unchanged.

At the same time, the group's 50% joint venture in Swedish pharmacy chain Kronans Apotek contributes zero to consolidated operating profit, but its persistent net losses drag group net earnings negative. The €281 million enterprise value bridges to a €173 million equity market cap via €109 million in forward net debt. The valuation allocation reveals a clear split between the core operating assets and the joint venture. The core Services and Products segments generate 100% of the group's €44 million forward EBITDA and are valued at an undemanding multiple of approximately 4.7x EV/EBITDA.

Conversely, the 50% stake in Kronans Apotek is treated as a distressed asset. Despite a book value of €187 million after consecutive write-downs in 2024 and 2025, the market allocates only about €75 million in enterprise value to the holding, implying roughly a 0.4x price-to-book ratio. For equity holders, the investment case hinges on whether Kronans Apotek can return to industry-standard retail margins or is a value trap that will eventually require a capital injection, threatening the dividend capacity of the otherwise stable distribution business.

ANALYTICAL ANCHOR

Core operations fully support the debt load, leaving the Kronans Apotek turnaround as the sole variable for large equity upside.

CORE ANALYSIS · POOL DEEP DIVES

08

Services

Pool deep dive — current_profit_engine.

The market values the Services segment as a defensive, infrastructure-like asset. Pharmaceutical distribution in the Nordics is decoupled from macroeconomic cycles; drug volumes are driven by demographics and healthcare policy, not consumer discretionary income. The valuation reflects the segment's transition from a low-margin inventory trader to a fee-based logistics platform. Under IFRS 15, only the distribution fee and service margins are recognized as net sales—stripping out the value of the pharmaceutical products—so the segment now displays capital-light economics with structural EBITDA margins approaching 20-25% of net revenue, up from less than 2% under the old gross invoicing model.

The Nordic pharmaceutical distribution market operates under stringent regulation, creating a rigid duopoly. In Finland, a single-channel system means pharmaceutical manufacturers grant exclusive distribution rights to one logistics provider. In Sweden, the market is multi-channel, but the physical infrastructure needed for temperature-controlled, GDP-compliant medicine logistics limits the market to a few dominant players. Oriola's moat rests on high barriers to entry and switching costs. The capital required to build a nationwide, cold-chain compliant distribution network with next-day delivery to every pharmacy and hospital is prohibitive for new entrants.

The economic model is distribution volume × fee rate × logistics efficiency. Scale is critical: the logistics network consists mostly of fixed costs (warehouses, IT, regulatory compliance), so high throughput is required to absorb overhead. Losing a major manufacturer contract directly hits the bottom line, because logistics costs cannot be reduced proportionally.

Allocating €163 million against €35 million in segment EBITDA implies a 4.7x EV/EBITDA multiple. For a highly regulated, duopoly distribution business with predictable but low-growth cash flows, a 4.5x to 5.5x multiple is standard. The valuation logic depends entirely on the stability of recurring earnings, not on future market expansion or margin improvement. So the valuation is realistic and undemanding for a defensive asset with high barriers to entry.

08

Kronans Apotek (50% JV)

Pool deep dive — asset_backed_value_pool.

The market values Kronans Apotek as a deeply distressed asset that needs a turnaround. After the merger with Apoteksgruppen in 2022, the JV was expected to generate significant procurement synergies and become a strong challenger in the Swedish retail pharmacy market. Instead, a prolonged, flawed ERP system integration in 2024 and 2025 disrupted store-level operations, leading to market share losses and severe margin compression. Oriola was forced to record two identical €16 million goodwill impairments, in Q4 2024 and Q4 2025. Because the JV is structurally unprofitable at the net level, it consumes capital and pays no dividends upstream. The 0.4x price-to-book valuation reflects scepticism about the 2027 profitability targets and the fear that Oriola may be forced into a dilutive recapitalization.

The Swedish pharmacy market was deregulated in 2009. Prescription pharmaceutical demand is stable, supported by the national high-cost protection system. But state-mandated pricing keeps retail margins on prescription drugs thin. Profitability depends entirely on cross-selling OTC products, beauty, and health merchandise, and on growing the e-commerce channel. The JV faces intense competition from state-owned Apoteket AB and Apotek Hjärtat, as well as aggressive online competitors like Apotea. Kronans Apotek's competitive position was badly damaged during the integration, and without a unified digital and loyalty strategy to match competitors, it operates at a structural disadvantage.

Pharmacy retail economics are determined by store footfall × conversion rate × basket size × gross margin. A healthy Swedish pharmacy chain should generate a 3% to 4% EBIT margin. Currently, the JV operates near EBITA breakeven and records large losses after PPA amortizations and financing costs. Recovering lost market share is essential to restore profitability; cost-cutting alone cannot close the gap.

The valuation logic is asset-based. The market assigns €75 million to an asset carried at €187 million. If the JV can achieve industry-standard margins by 2027, the €187 million book value could be realized either through resumed upstream dividends or a strategic exit. The immediate 12-month milestone is full stabilization of the ERP system, ensuring no further inventory or operational disruptions, followed by sequential quarterly market

08

Products

Pool deep dive — scaling_current_business.

The market values the Products segment for its higher structural gross margins relative to the Services distribution business. The segment includes the wholesale of traded goods, OTC products, and special licensed medicines in Finland and Sweden. Its valuation profile improved markedly after the April 2025 divestment of Svensk dos AB (the Swedish dose dispensing business) for approximately €9.5 million. Svensk dos was a low-margin, tender-driven business that consumed working capital and management attention. Without it, the remaining Products segment is a cleaner, higher-return wholesale operation.

The OTC and traded goods wholesale market is fragmented, unlike the rigid prescription distribution duopoly. Leveraging Oriola's existing logistics infrastructure, the Products segment can generate higher profitability on proprietary brands and specialty items without separate supply chain investments. Its competitive advantage is weaker than Services but supported by internal synergies, producing high incremental returns on capital.

Unlike the agent-based Services segment, the Products segment operates as a principal wholesaler, bearing inventory risk. Unit economics rely on the spread between wholesale purchase prices and pharmacy sell-in prices. Divesting Svensk dos eliminated a drag on these economics, allowing the segment's EBITDA margin to settle at roughly 4.8% of net sales, yielding approximately €9 million in forward EBITDA.

Allocating €43 million in enterprise value against €9 million in EBITDA gives a 4.8x implied multiple, in line with the group's core distribution valuation. This valuation requires the segment to maintain its current OTC wholesale volumes and avoid inventory obsolescence. The segment is a logical extension of the core logistics network.

CORE ANALYSIS · CROSS-POOL BRIDGE

09

Putting the pools back together

How the parts add up — and where the multiple has to come from.

The transition from historical actuals to the 2026 forward forecast is distorted by accounting changes and the JV equity structure, requiring a careful bridge. The large drop in group net sales from €1.9 billion to €210 million is entirely due to the IFRS 15 restatement. Under the agent reporting model for pharmaceutical distribution, Oriola no longer books the gross value of the medicines moving through its network, only the distribution fee.

This has zero impact on absolute cash flow, but it pushes the reported EBITDA margin from roughly 1.0% to over 20%. The forecast EBITDA of €44 million represents the recurring earnings power of the Services and Products segments after stripping out non-recurring restructuring and divestment costs incurred in 2025.

The bridge is weakest at net earnings and net debt. Because Kronans Apotek is a joint venture, its revenues and EBITDA are excluded from Oriola's income statement above the operating profit line. However, its substantial net losses flow directly into Oriola's pre-tax profit, creating a permanent structural disconnect where the group generates strong operating EBITDA but deeply negative net earnings. Moreover, the forecast shift in net debt to €109 million in 2026 reflects a large positive adjustment in working capital as inventory and trade payables are un-grossed under the new agent model.

BRIDGE MECHANICS

The IFRS 15 restatement reduces reported net sales without affecting cash flow, while JV losses mechanically decouple strong EBITDA from deeply negative net earnings.

The sum-of-the-parts reality check reveals a sharp valuation tension between the core distribution operations and the distressed retail JV. In this allocation, the market prices the core Services and Products divisions as highly predictable but stagnant assets. Generating €44 million in EBITDA, an assigned enterprise value of €206 million yields a 4.7x multiple.

This implies the current economics of the distribution business fully support their share of the valuation, requiring no aggressive assumptions about future growth or margin expansion. The core business is de-risked at these levels, provided it does not lose duopoly market share.

The tension lies in the Kronans Apotek valuation. Comparing the JV's €187 million carrying value against the €75 million enterprise value assigned by the market, the market assigns zero value to a future turnaround, instead applying a roughly 60% realizability discount to book value.

This implies investors believe the ERP integration damage is permanent, or that the JV will need further dilutive capital injections before reaching industry-standard profitability. If the JV carrying value is correct and the turnaround succeeds, the €112 million gap between market price and book value represents unpriced equity upside. If the market is correct, the core operations will absorb the full €109 million net debt.

CORE ANALYSIS · SCENARIOS & VERDICT

10

Scenario logic and the bottom-line judgment

How the report would look different if the call breaks the wrong way.

Oriola's equity value is sensitive to the resolution of the Kronans Apotek distress and the stability of core distribution margins. The scenarios differ almost entirely based on the joint venture's trajectory.

In the upside scenario, Kronans Apotek stabilizes operations after the ERP integration, regains lost market share, and achieves a 3% to 4% EBIT margin by 2027. The market discount disappears, and the asset is valued at its €187 million book value. Holding the core business multiple constant, group EV expands to €393 million, yielding an equity value of €284 million after deducting the €109 million net debt.

The downside scenario depends on a compounding failure across both value pools. If the JV turnaround fails, it may trigger a capital call, forcing Oriola to inject cash and pushing net debt higher (assumed €140 million). Concurrently, if the Services segment loses a major pharmaceutical manufacturer contract to Tamro, core EBITDA could compress. In a scenario where core EV drops to €180 million and the JV is written down to zero, the higher debt load pushes equity value to roughly €40 million.

BOTTOM LINE

The key question surrounding Oriola Oyj is whether the market's severe discount on the Kronans Apotek joint venture is a permanent impairment or a temporary dislocation from flawed integration execution. The company is split between a highly predictable, cash-generative distribution infrastructure and a distressed retail pharmacy asset that is destroying group net earnings. If management hits its 2027 industry benchmark targets, the JV offers significant upside. If the turnaround stalls, the JV remains a toxic liability that suppresses group equity value.

KEY CONDITIONS Scenarios depend entirely on the trajectory of the Kronans Apotek joint venture, specifically whether it can halt cash burn and reach industry-standard retail margins by 2027.								
THESIS BREAKER Kronans Apotek fails to halt cash burn before liquidity buffers run out, forcing a dilutive capital call.								

CATALYSTS

18

Monitoring checklist

Near, medium and long-term events that could shift the call.

CATALYST REGISTER				
	TIMING	POOL	INDICATOR	VALUATION IMPACT
Kronans Apotek Quarterly EBITA improvement	NEAR-TERM	Kronans Apotek (50% JV)	Sequential margin improvement toward 2.0%	+€0.60/share
Swedish Pharmacy Market Share recovery	NEAR-TERM	Kronans Apotek (50% JV)	JV share recovering above 21.0%	Closes P/B discount
Capital Markets Day Updates	MEDIUM-TERM	Kronans Apotek (50% JV)	Clear JV exit strategy or capital allocation plan	Removes dilution risk
Services Segment EBITDA Margin Defense	MEDIUM-TERM	Services	Maintained above 20% under agent reporting	Confirms fixed-cost absorption
READ - THROUGH The key catalyst is the quarterly EBITA progression of Kronans Apotek. It is the most observable metric and determines whether the €75 million valuation is overly pessimistic or correctly priced. A catalyst likely to be misunderstood is the Services segment revenue and margin reporting; investors need to adjust to the new IFRS 15 agent accounting and focus on absolute EBITDA, not top-line revenue swings. The checklist links to valuation by isolating the two main thesis drivers: ending JV capital destruction and defending the core distribution fee pool.				

RISKS

Risk register

19

Each risk's pool, mechanism, early - warning trigger, impact band and structural type.

RISK REGISTER					
	POOL	MECHANISM	EARLY WARNING	IMPACT	TYPE
Kronans Apotek Capital Call	Kronans Apotek (50% JV)	Continued net losses exhausting JV liquidity buffers forcing a capital injection.	Net losses persisting	HIGH	THESIS-BREAKER IF
Loss of Pharmaceutical Contracts	Services	Loss of market share to Tamro in Finnish/Swedish distribution.	Contract churn	MEDIUM	STRUCTURAL
Net Debt Escalation	Services	Working capital outflows failing to stabilize post-IFRS 15 transition.	Cash flow drag	MEDIUM	MANAGEABLE
READ - THROUGH The biggest risk is a Kronans Apotek capital call. Although the JV is equity-accounted and ring-fenced, persistent cash burn would force the two shareholders to inject fresh capital or dilute heavily. A secondary risk is the loss of pharmaceutical manufacturer contracts in the Services segment. Because the distribution network has large fixed costs, any volume loss hits the EBITDA line directly. Finally, the interaction of these risks is worrying: if the core business suffers margin compression while the JV needs a capital injection, Oriola's forward net debt of €109 million will breach comfortable leverage limits.
